## Nutrients/foods to increase fertility

### Carbohydrates

- ✓ 45-60% of daily calories required.
- ✓ Up to 78% intake cause higher risk of ovulatory infertility.

### Proteins

- ✓ 10-35% of daily calories required.
- ✓ Arginine, glutamine, aspartic acid, tryptophan, and tyrosine are essential.
- ✓ Vegan diet suggested.

### Healthy fats

- ✓ 20-35% of daily calories required.
- ✓ Necessary fatty acids ranging from 100-1000 mg/55 kg of body weight of the lactating women.

## Foods to avoid

- Trans fats
- Refined sugars
- Excess caffeine
- Animal protein
- Alcohol
- Tobacco smoking

Infertility

Protein damage

DNA damage

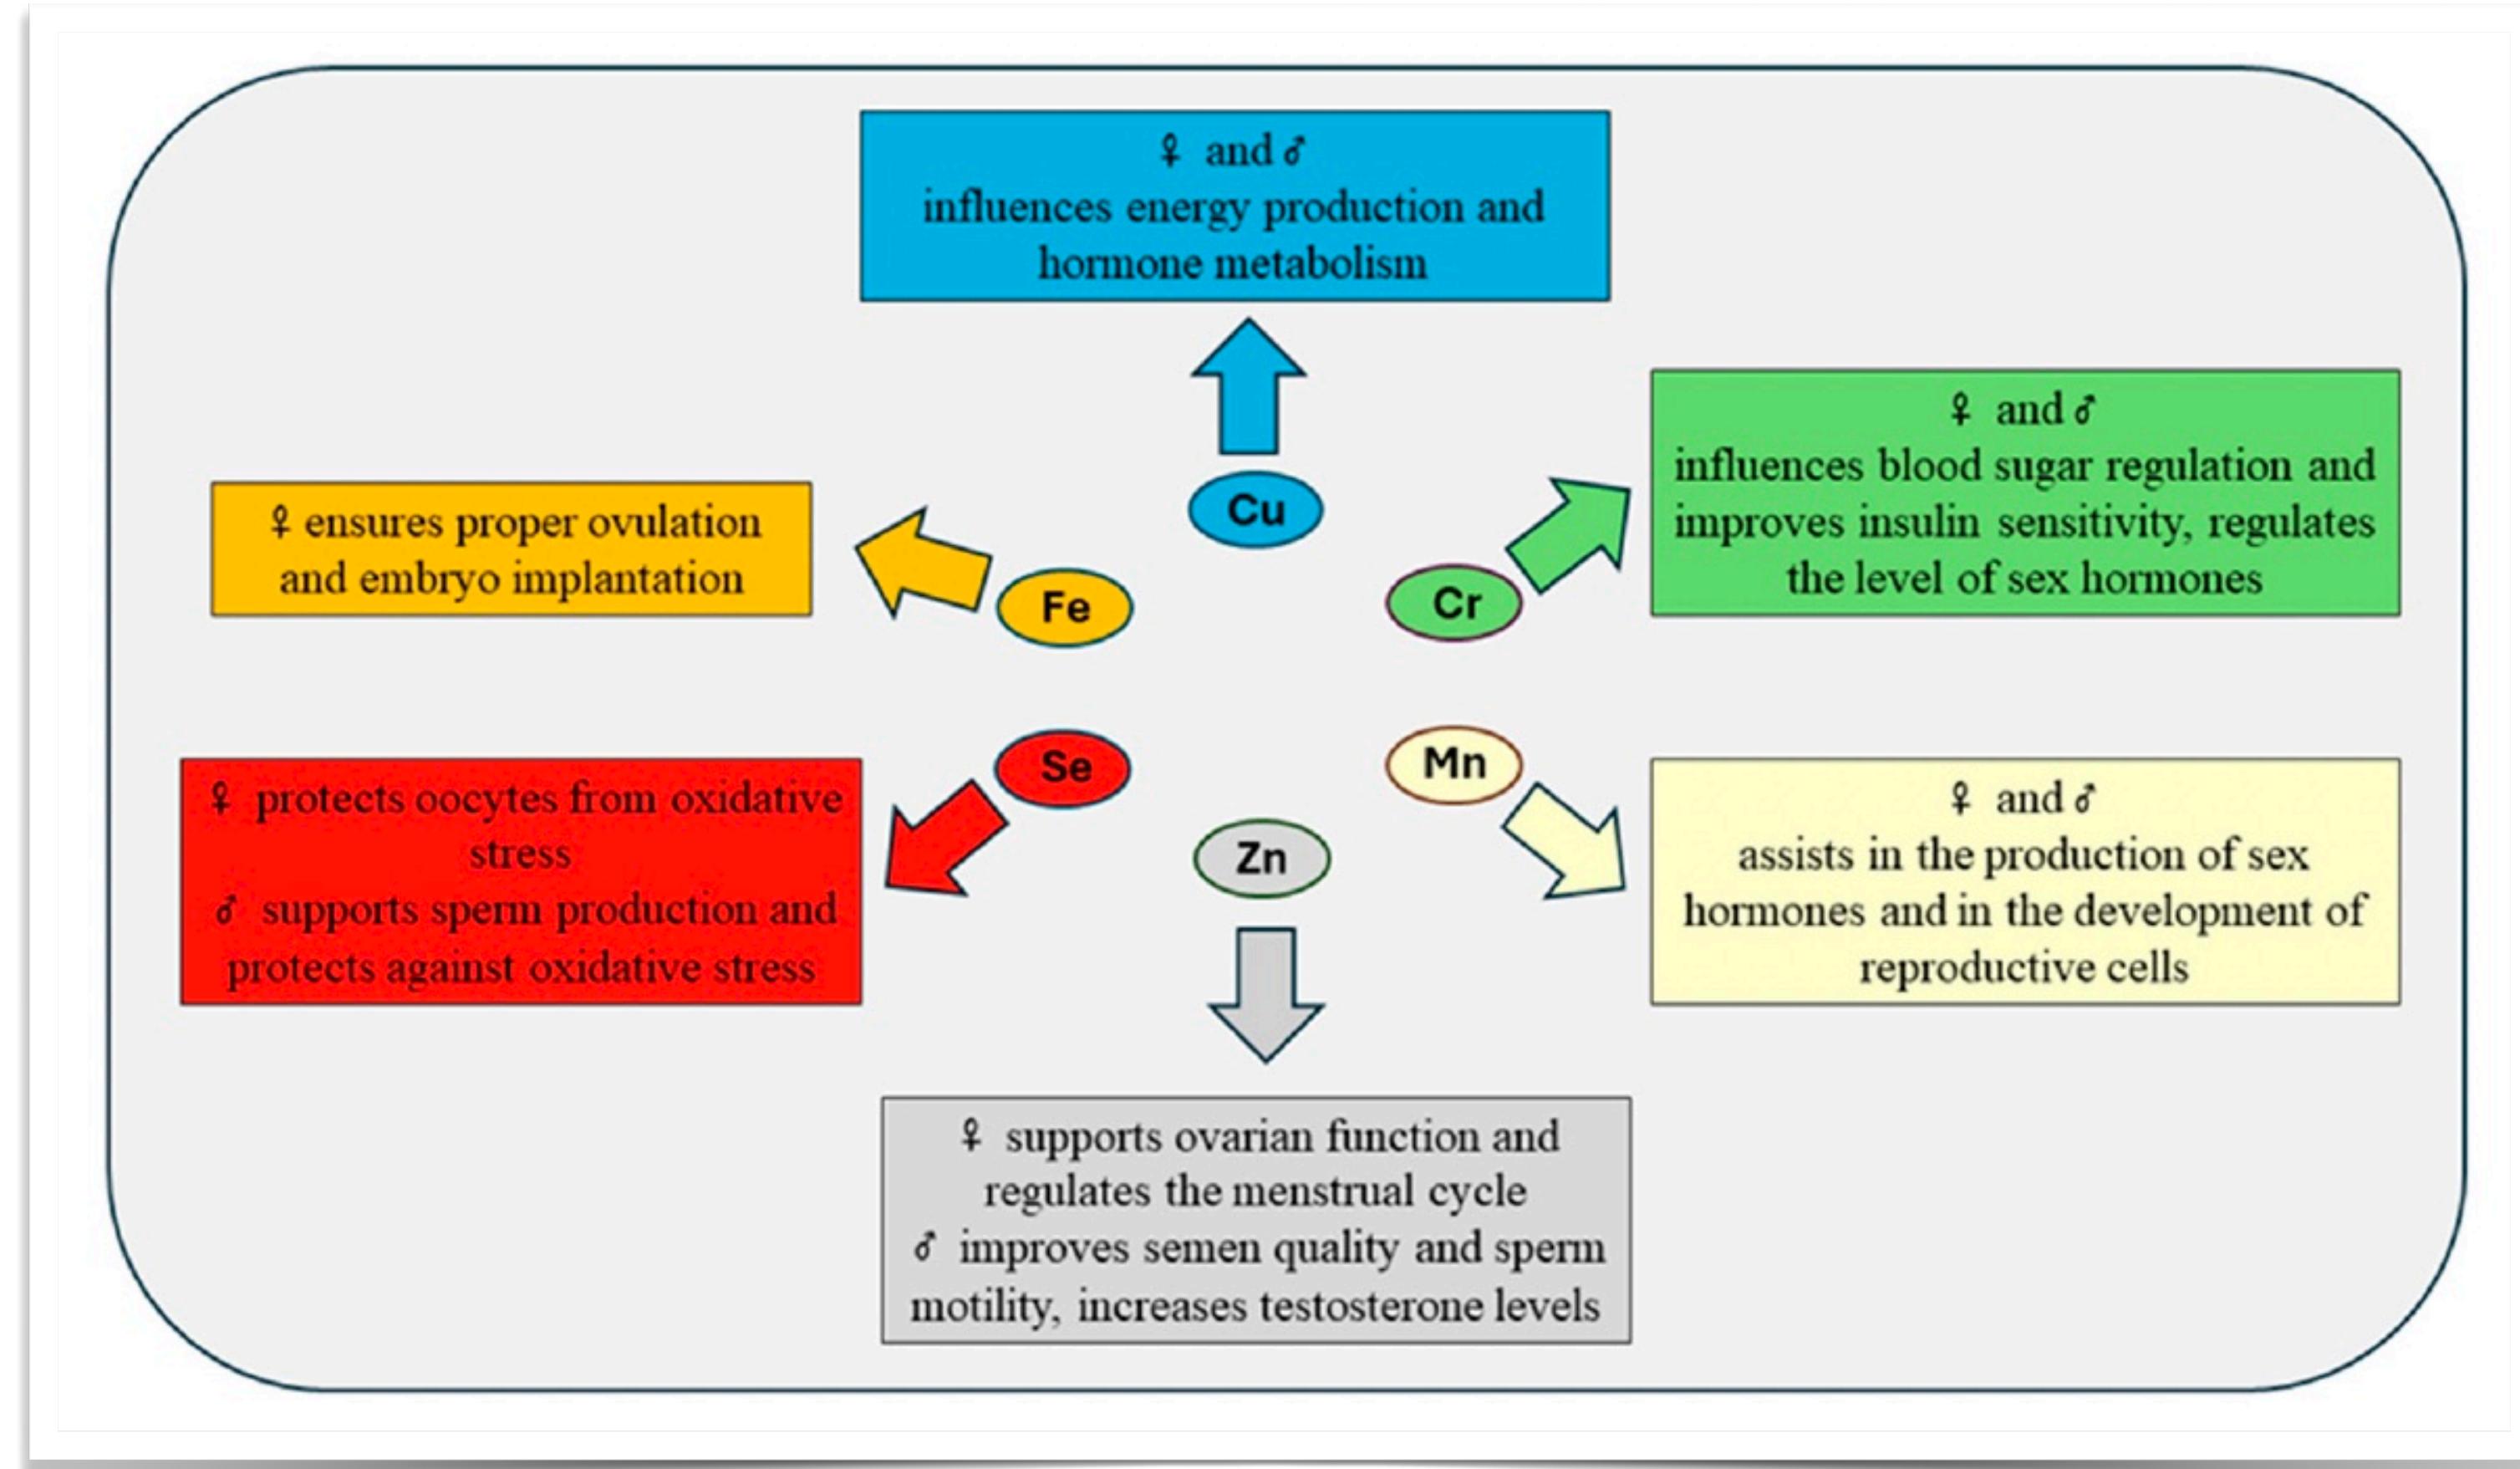

Lipid peroxidation

Bio-membrane damage

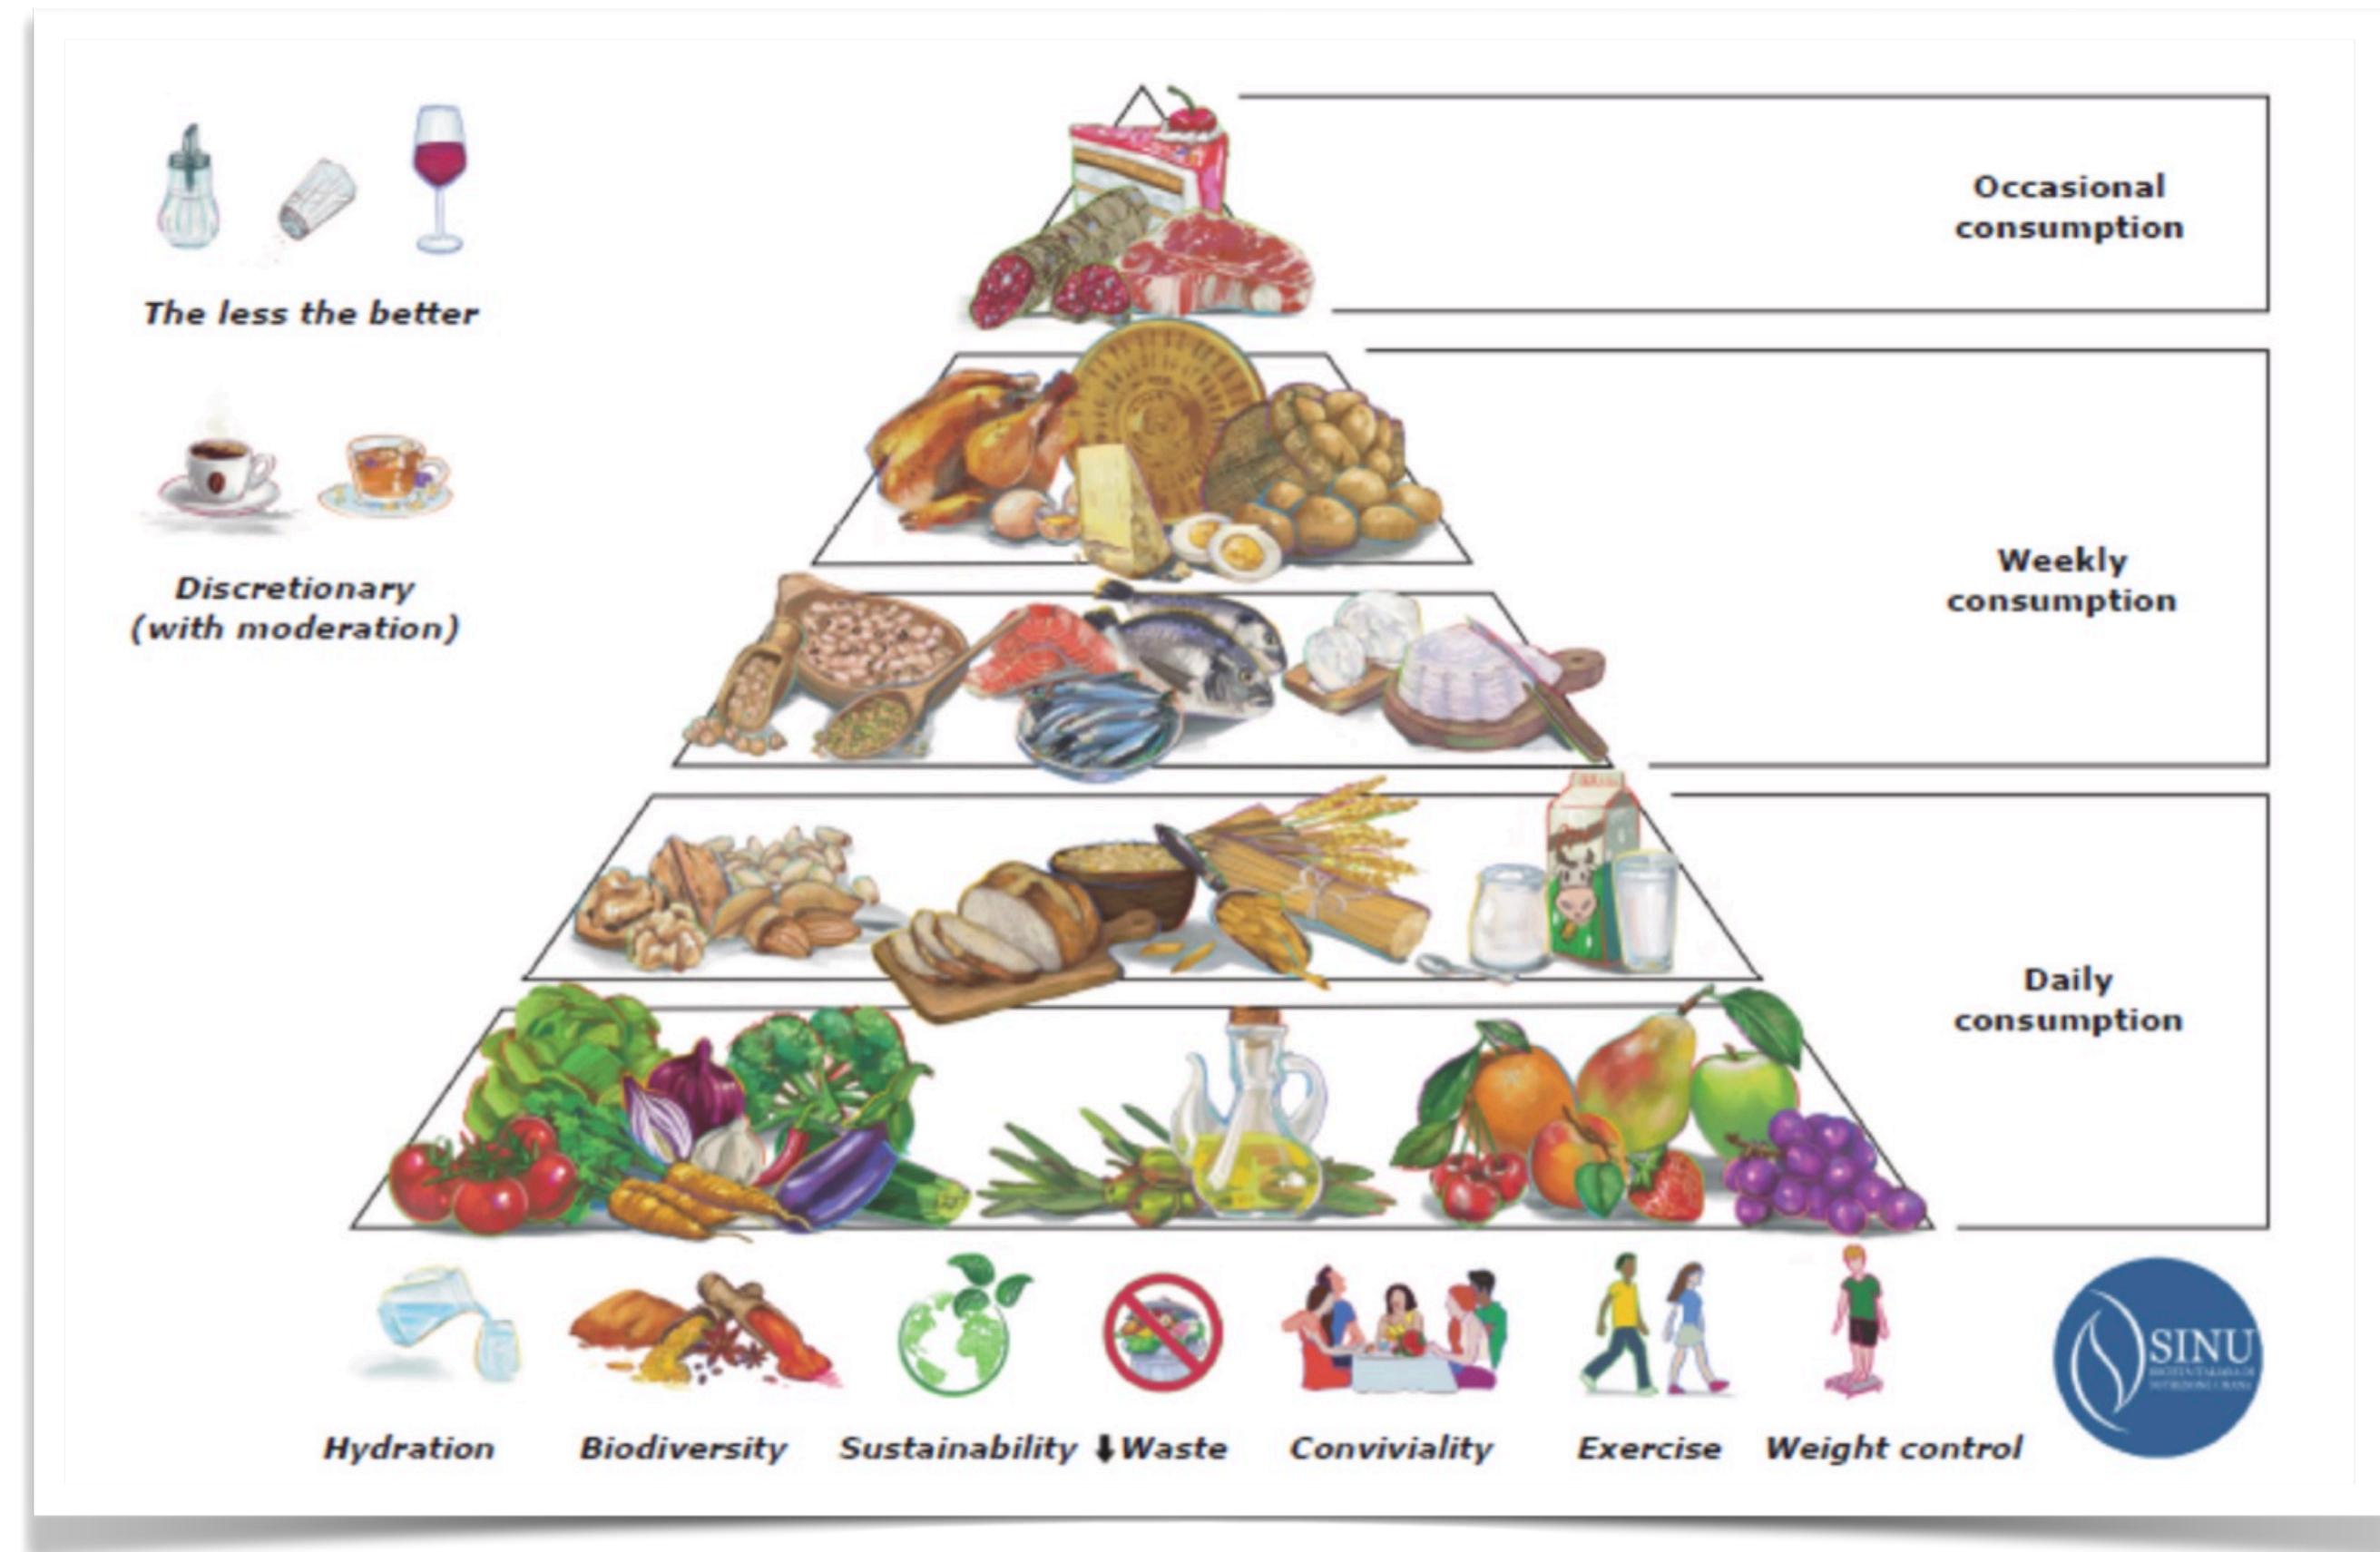

Oxidative stress

Micronutrient	Description	Effect on female	Effect on male	Recommended dose	Consequences of deficiency	Sources	References
Folic acid	<ul style="list-style-type: none"> <li>Known as vitamin B9</li> <li>Essential compound involved in key biochemical processes</li> </ul>	<ul style="list-style-type: none"> <li>Improves chances of pregnancy</li> <li>Reduces risk of ovulatory infertility</li> </ul>	<ul style="list-style-type: none"> <li>Provides carbon for DNA synthesis and methylation</li> <li>Critical to spermatogenesis</li> </ul>	400 µg/day	<ul style="list-style-type: none"> <li>Premature birth</li> <li>Reduced intrauterine growth</li> <li>Increases risk of diabetes-associated congenital disabilities</li> </ul>	Vegetables, fruits, nuts, seafood, eggs, dairy, meat	Barchitta et al. (2020), González Rodríguez et al. (2018), National Institutes of Health (2008)
Calcium	<ul style="list-style-type: none"> <li>Plays a role in reproductive health</li> <li>Facilitates fertilization</li> </ul>	<ul style="list-style-type: none"> <li>Creates alkaline environment in vagina</li> <li>Follicular production</li> <li>Oocyte activation and maturation</li> </ul>	Regulates sperm motility	1 g/day	<ul style="list-style-type: none"> <li>Hypertensive disorders of pregnancy</li> <li>Osteopenia, paresthesia</li> <li>Muscle cramps, tetanus</li> <li>Delayed fetal growth</li> <li>Mineralization in the fetus</li> </ul>	Dairy products, cabbage, kale, broccoli, almonds, tofu, sardines with bones	Peacock (2010), Simopoulos (1999)
Iron	<ul style="list-style-type: none"> <li>Maintenance of healthy red blood cells</li> <li>Oxygen transport in the blood</li> <li>Immune function</li> <li>Free radical homeostasis</li> </ul>	Helps the fertilized ovum implantation process	<ul style="list-style-type: none"> <li>Essential to ejaculate fluidity</li> <li>Maintains sperm pH</li> <li>Sources of ferritin, which protects testicular tissue</li> <li>Developing sperm</li> </ul>	30–60 mg/day	<ul style="list-style-type: none"> <li>Risk of preterm birth</li> <li>Decreased defenses against infection</li> <li>Abnormal psychomotor development and cognitive impairment in infancy</li> </ul>	Beans, vegetables, cereals, breads	Martin et al. (2016), Tremellen and Pearce (2015)
Vitamin B12	<ul style="list-style-type: none"> <li>Known as cobalamin</li> <li>Cofactor in DNA and fatty acid synthesis</li> <li>Amino acid metabolism</li> </ul>	<ul style="list-style-type: none"> <li>Prevents spontaneous abortion</li> <li>Necessary for the development and functionality of the placenta</li> </ul>	Improves the sperm quality	50 µg/day	<ul style="list-style-type: none"> <li>Associated with abnormal estrogen level that interferes with implantation of fertilized egg</li> </ul>	Fish, meat, poultry, eggs, milk	González Rodríguez et al. (2018), Visentin et al. (2016)
Selenium	<ul style="list-style-type: none"> <li>Selenoprotein</li> <li>Plays a potential role in both female and male fertility</li> </ul>	<ul style="list-style-type: none"> <li>Placenta development</li> <li>Adequate development of the fetus' nervous system</li> </ul>	<ul style="list-style-type: none"> <li>Maintains the spermatozoa integrity and viability</li> <li>Protects them from oxidative damage</li> </ul>	60 µg/day	<ul style="list-style-type: none"> <li>Increases risk of pregnancy complications</li> <li>Fetal growth restriction</li> <li>Increases thyroid hormone</li> <li>Alters the placental function</li> </ul>	Nuts, seafood, fish, shrimp, muscle meats, cereals, dairy products	Mistry et al. (2012), Qazi et al. (2018)
Zinc	<ul style="list-style-type: none"> <li>Plays a key role in fertility for both female and male</li> <li>Has a greater importance for men</li> </ul>	<ul style="list-style-type: none"> <li>Involved in capacitation and fertilization in the female reproductive tract</li> </ul>	<ul style="list-style-type: none"> <li>Testosterone synthesis</li> <li>Sperm viability</li> <li>Testicle development</li> </ul>	20 mg/day	<ul style="list-style-type: none"> <li>Preterm delivery</li> <li>Stillbirth</li> <li>Fetal neural tube defects</li> <li>Fetal growth restriction</li> </ul>	Oysters, eggs, red meat, poultry, seafood, beans, nuts, grains, dairy	Kerns et al. (2018), Van Tienhoven (1968)
Vitamin E	<ul style="list-style-type: none"> <li>A vital antioxidant in the cell membrane</li> <li>Supports reproductive functions</li> </ul>	<ul style="list-style-type: none"> <li>Participates in fertilized egg cell implantation and placenta development</li> </ul>	<ul style="list-style-type: none"> <li>Supports reproductive function in men</li> <li>Increases sperm quality and quantity</li> </ul>	22–30 mg/day	<ul style="list-style-type: none"> <li>Placental aging</li> <li>Vascular endothelial injury</li> <li>Disorders of pregnancy</li> <li>Placental abruption</li> <li>Abortion</li> <li>Premature birth</li> </ul>	Nuts, seeds, vegetable oils, green leafy vegetables, fortified cereals	Buhling and Grajecki (2013), Rosen and Gallagher (2011)
Vitamin A	<ul style="list-style-type: none"> <li>Supports the immune system</li> <li>Protects the gonads, reproductive tissues from oxidative stress</li> </ul>	<ul style="list-style-type: none"> <li>Affects ovarian follicular growth, uterine environments, and oocyte maturation</li> </ul>	<ul style="list-style-type: none"> <li>Has influence on sperm morphology and concentration</li> </ul>	370 µg/day	<ul style="list-style-type: none"> <li>Stops puberty in females and males</li> <li>Predisposes to low rates of fertilization and embryo mortality</li> <li>Reduces male sexual desire</li> </ul>	Liver, fish oil, eggs, milk, leafy greens, vegetables, tomatoes, fruits	Cordova-Izquierdo (2016), Simopoulos (1999)
Vitamin C	<ul style="list-style-type: none"> <li>Aiding in tissue, hormone development</li> <li>Cofactor for enzymes, reducing oxidative damage</li> </ul>	<ul style="list-style-type: none"> <li>Essential for collagen biosynthesis</li> <li>Vital for adequate ovarian follicle growth and also for the ovulation and luteal phases</li> </ul>	<ul style="list-style-type: none"> <li>Affects the integrity and structure of sperm</li> <li>Promotes an environment for sperm to thrive</li> </ul>	85 mg/day	<ul style="list-style-type: none"> <li>Incidence of severe preeclampsia</li> </ul>	Citrus, berries, pepper, kiwis, broccoli, brussels sprouts, tomatoes, potatoes	Buhling and Grajecki (2013), National Institutes of Health (2008)

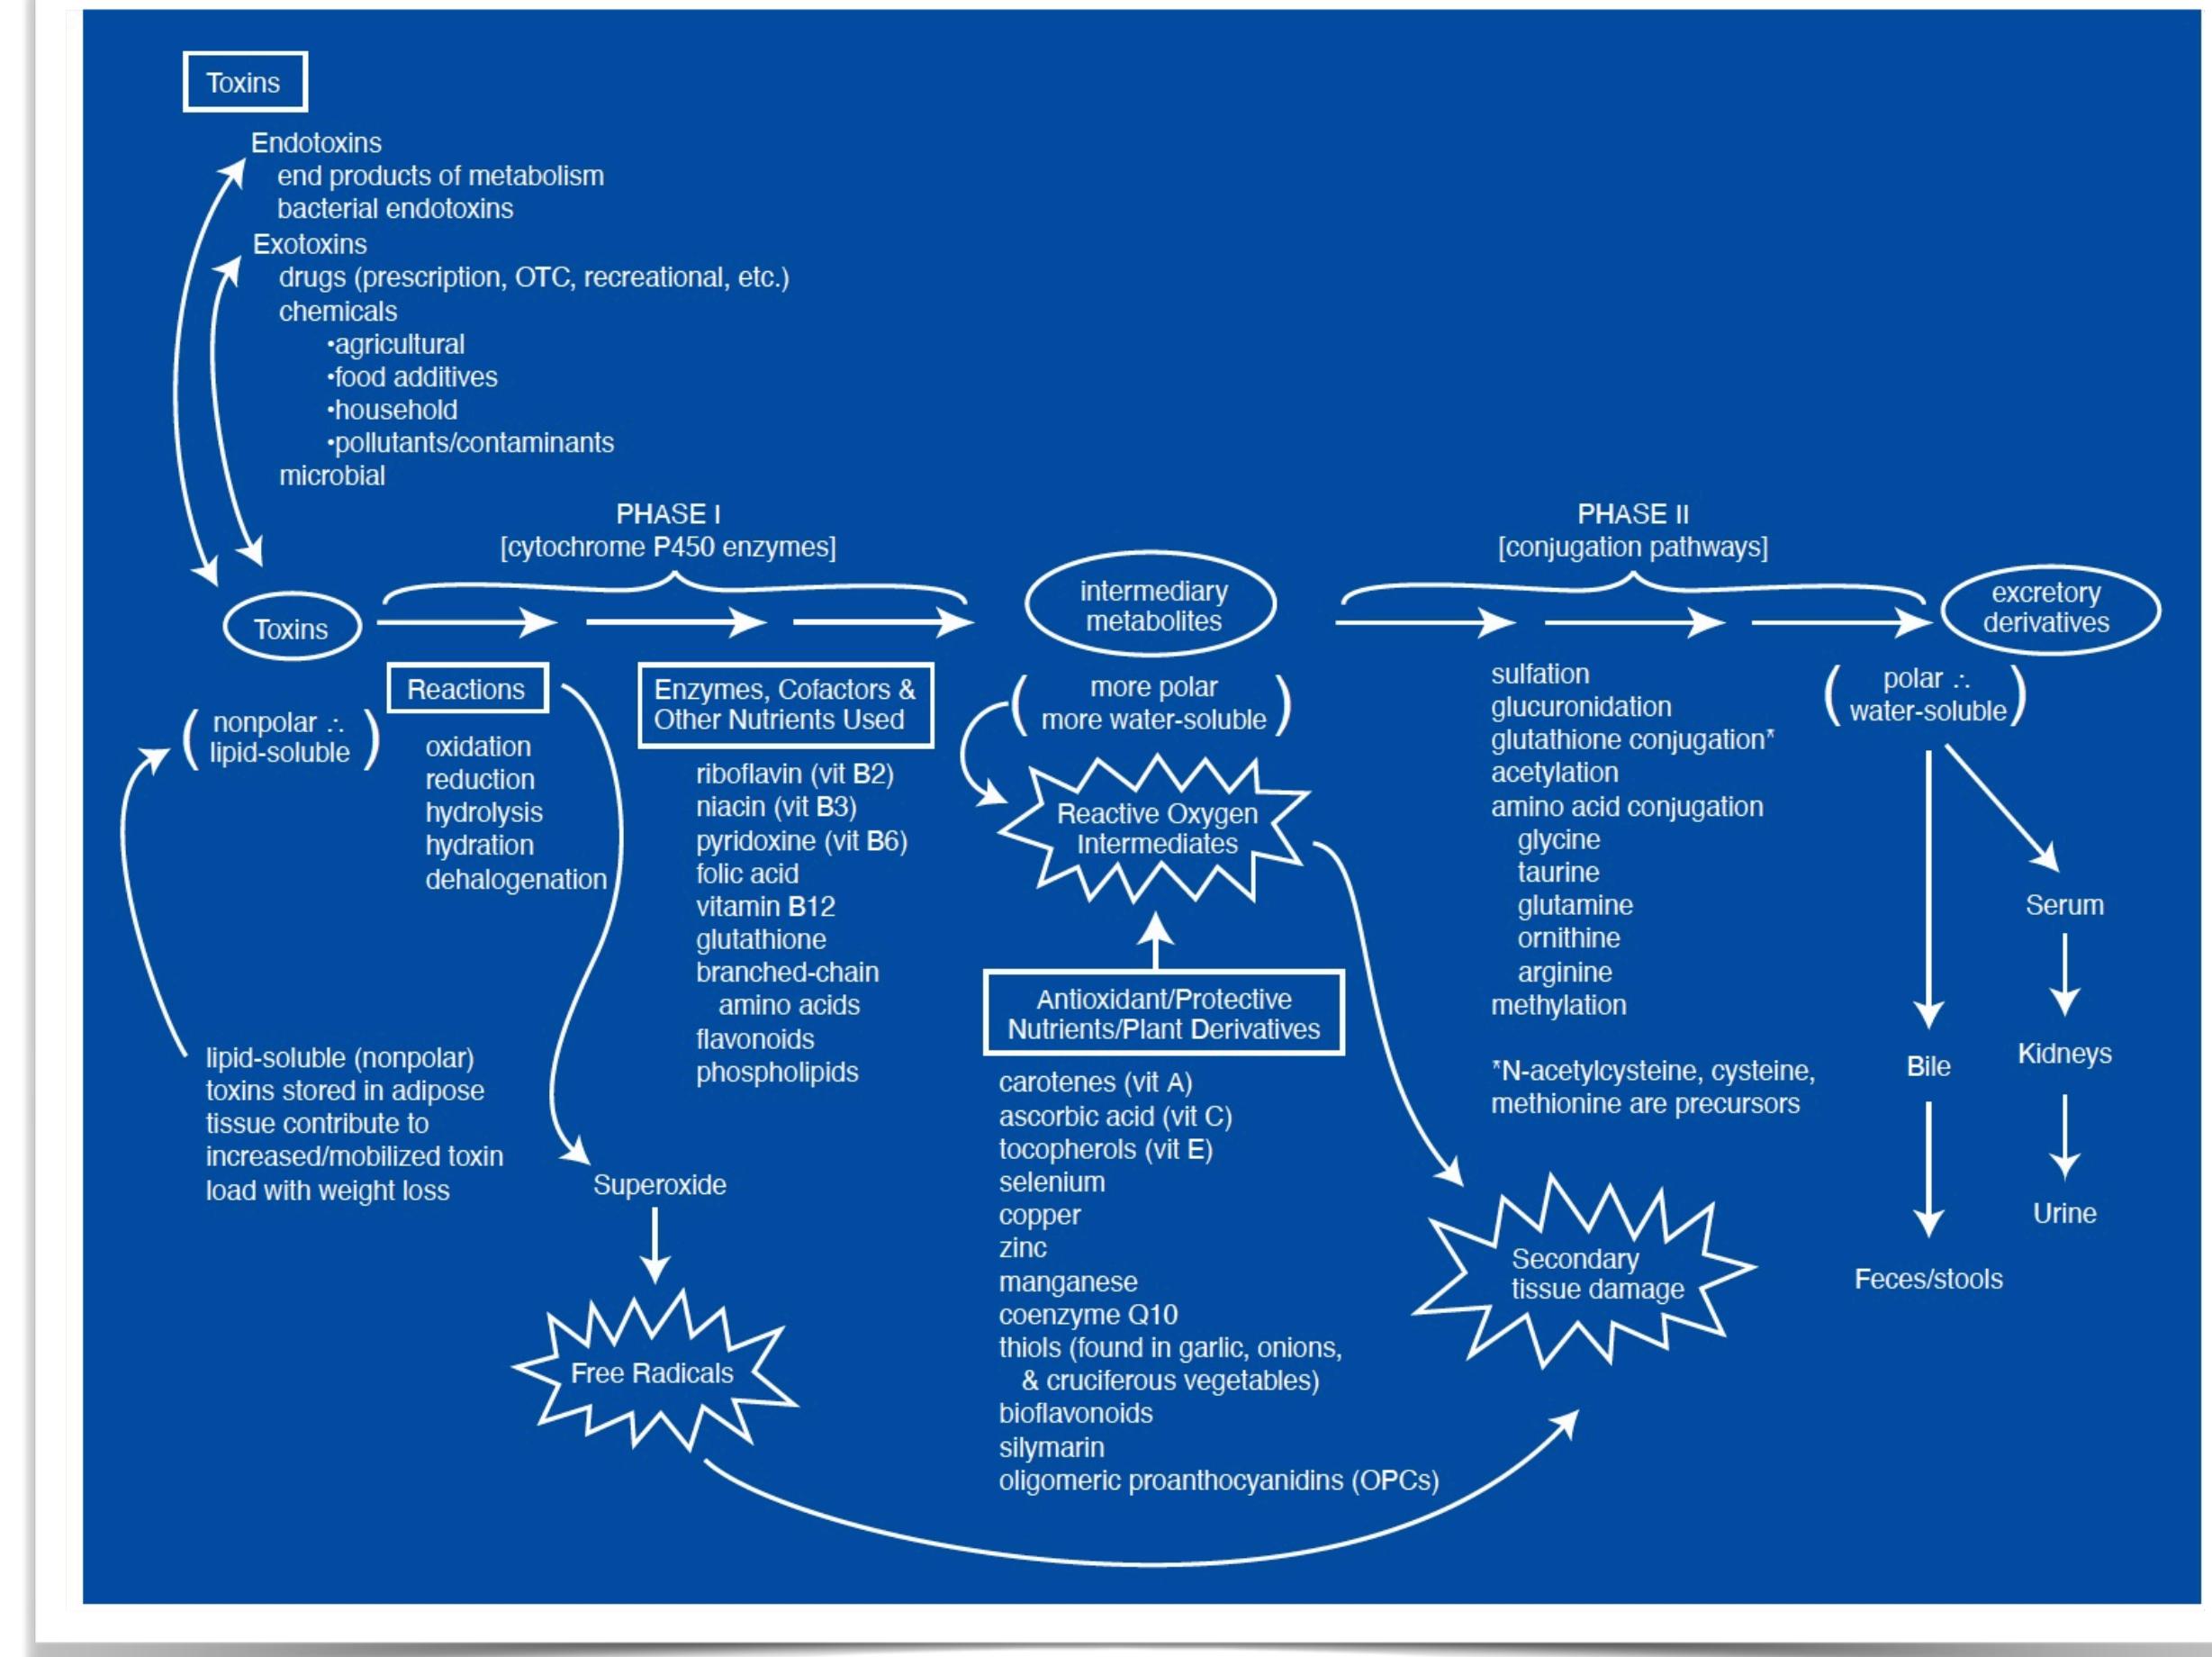

# In prevenzione

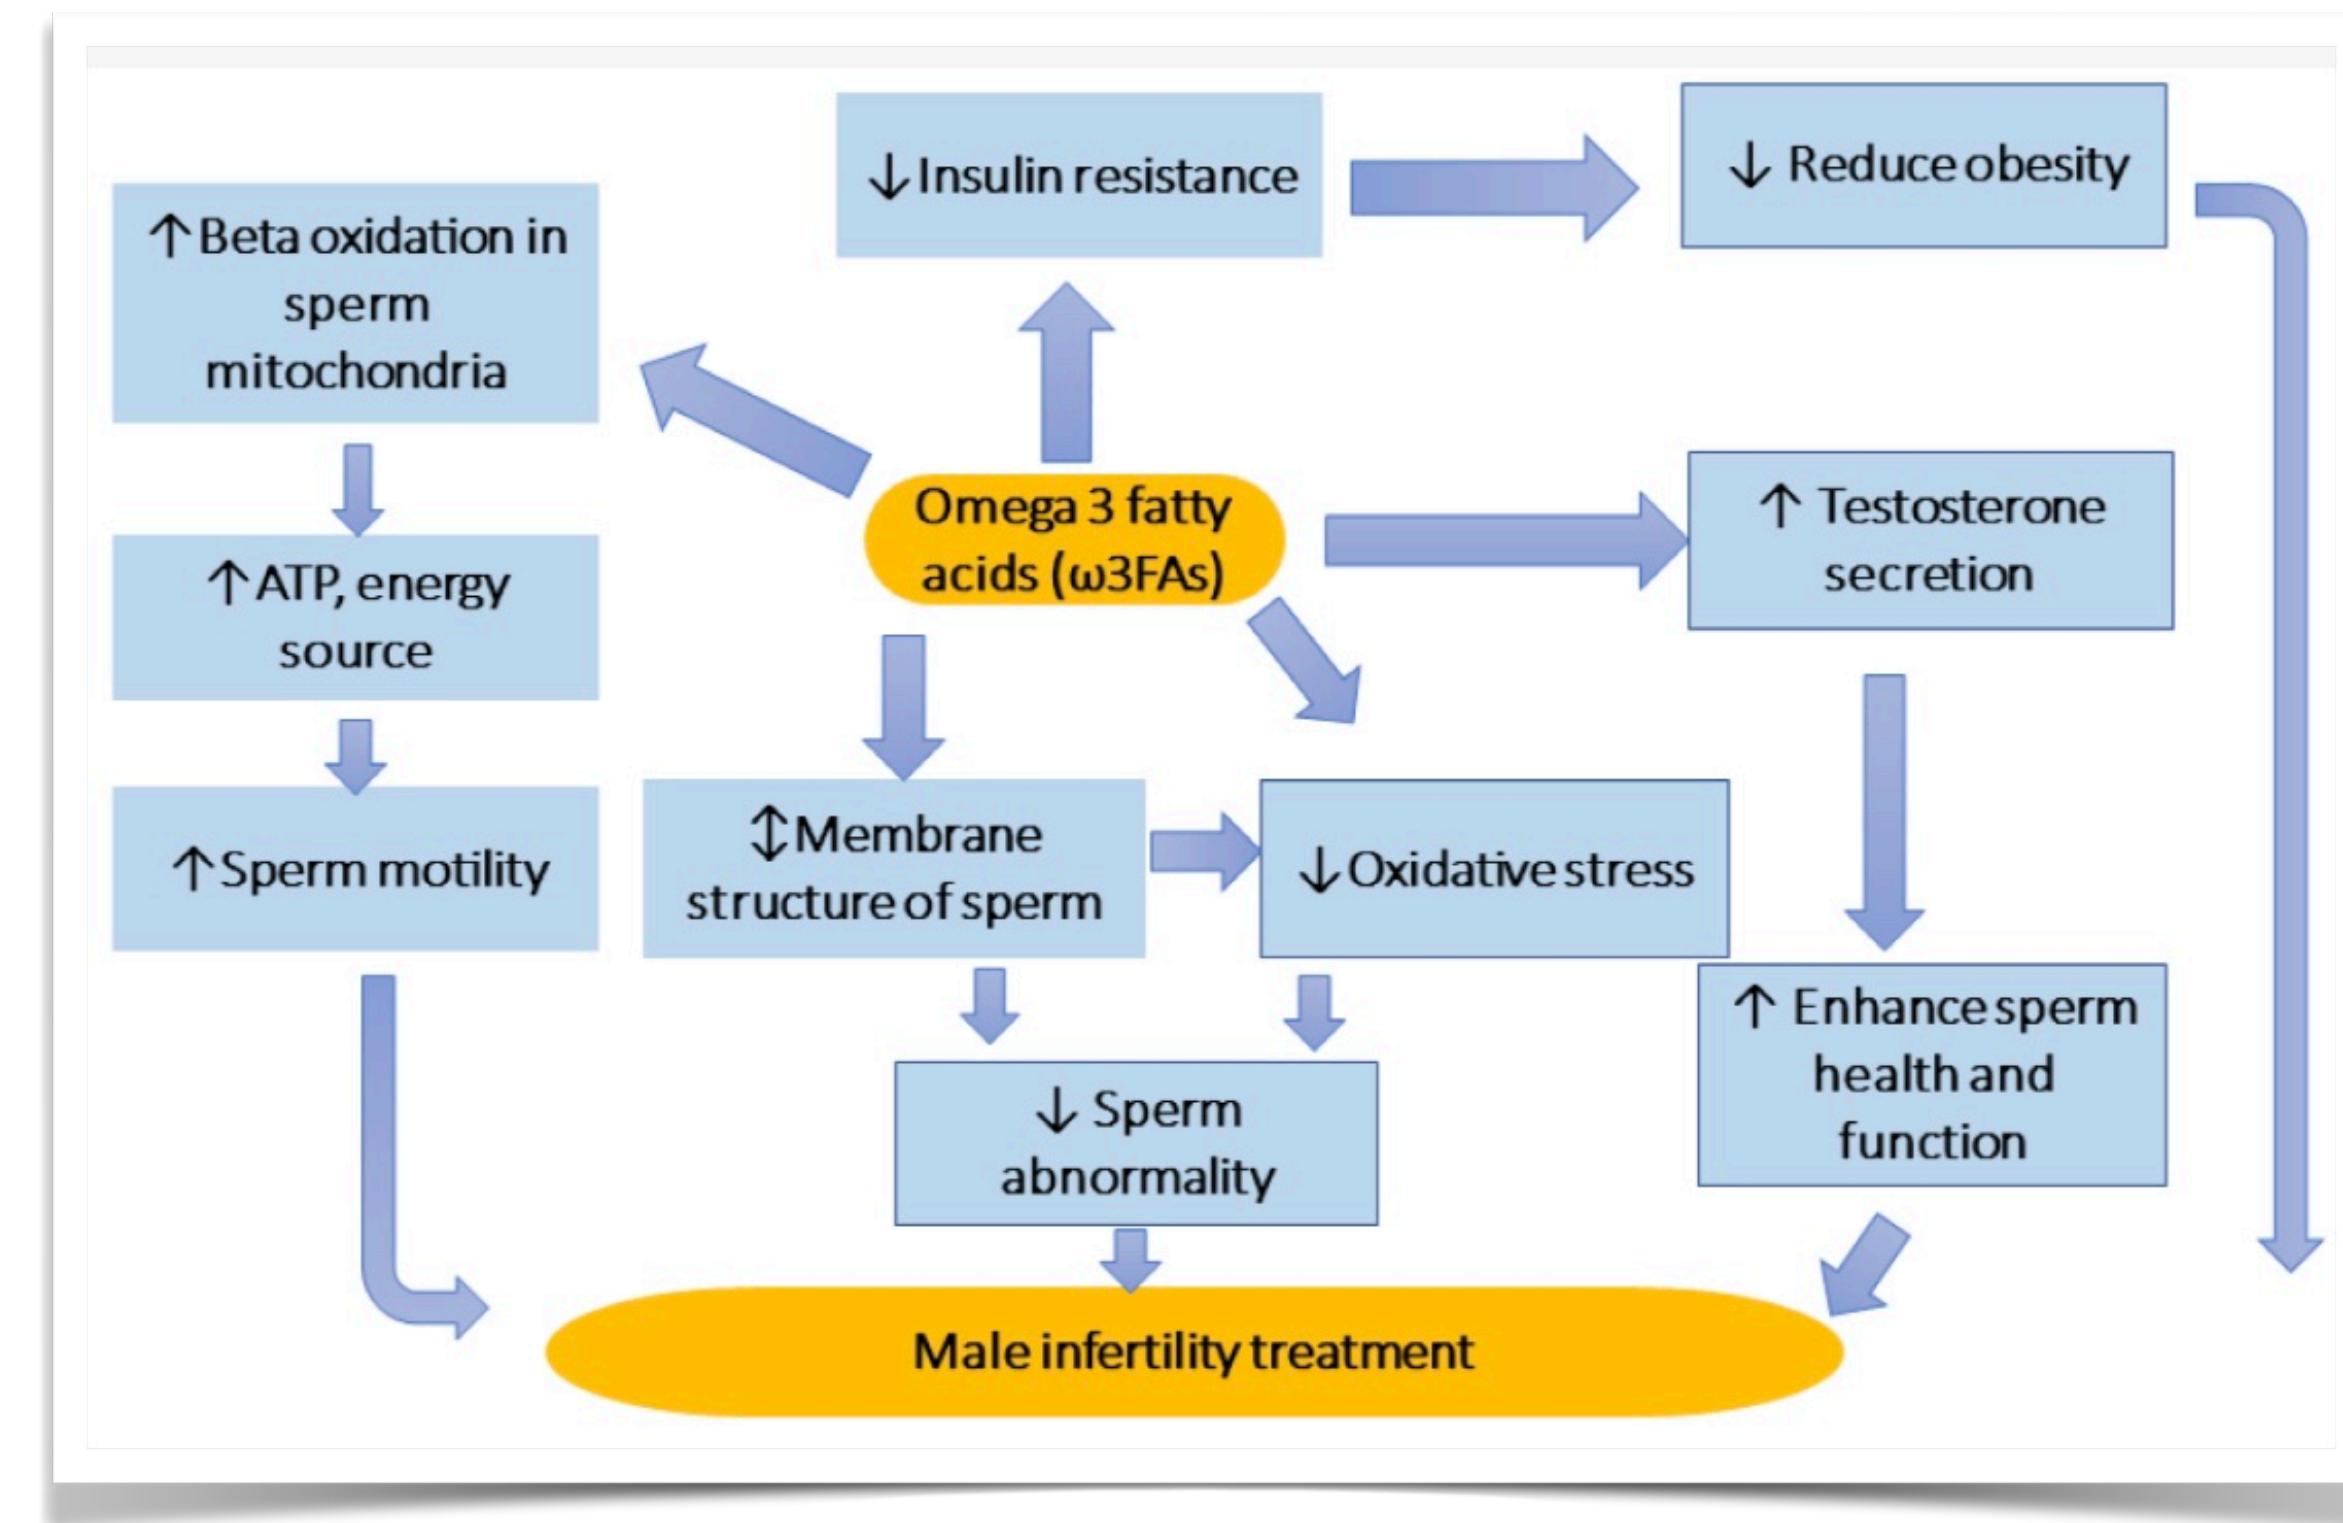

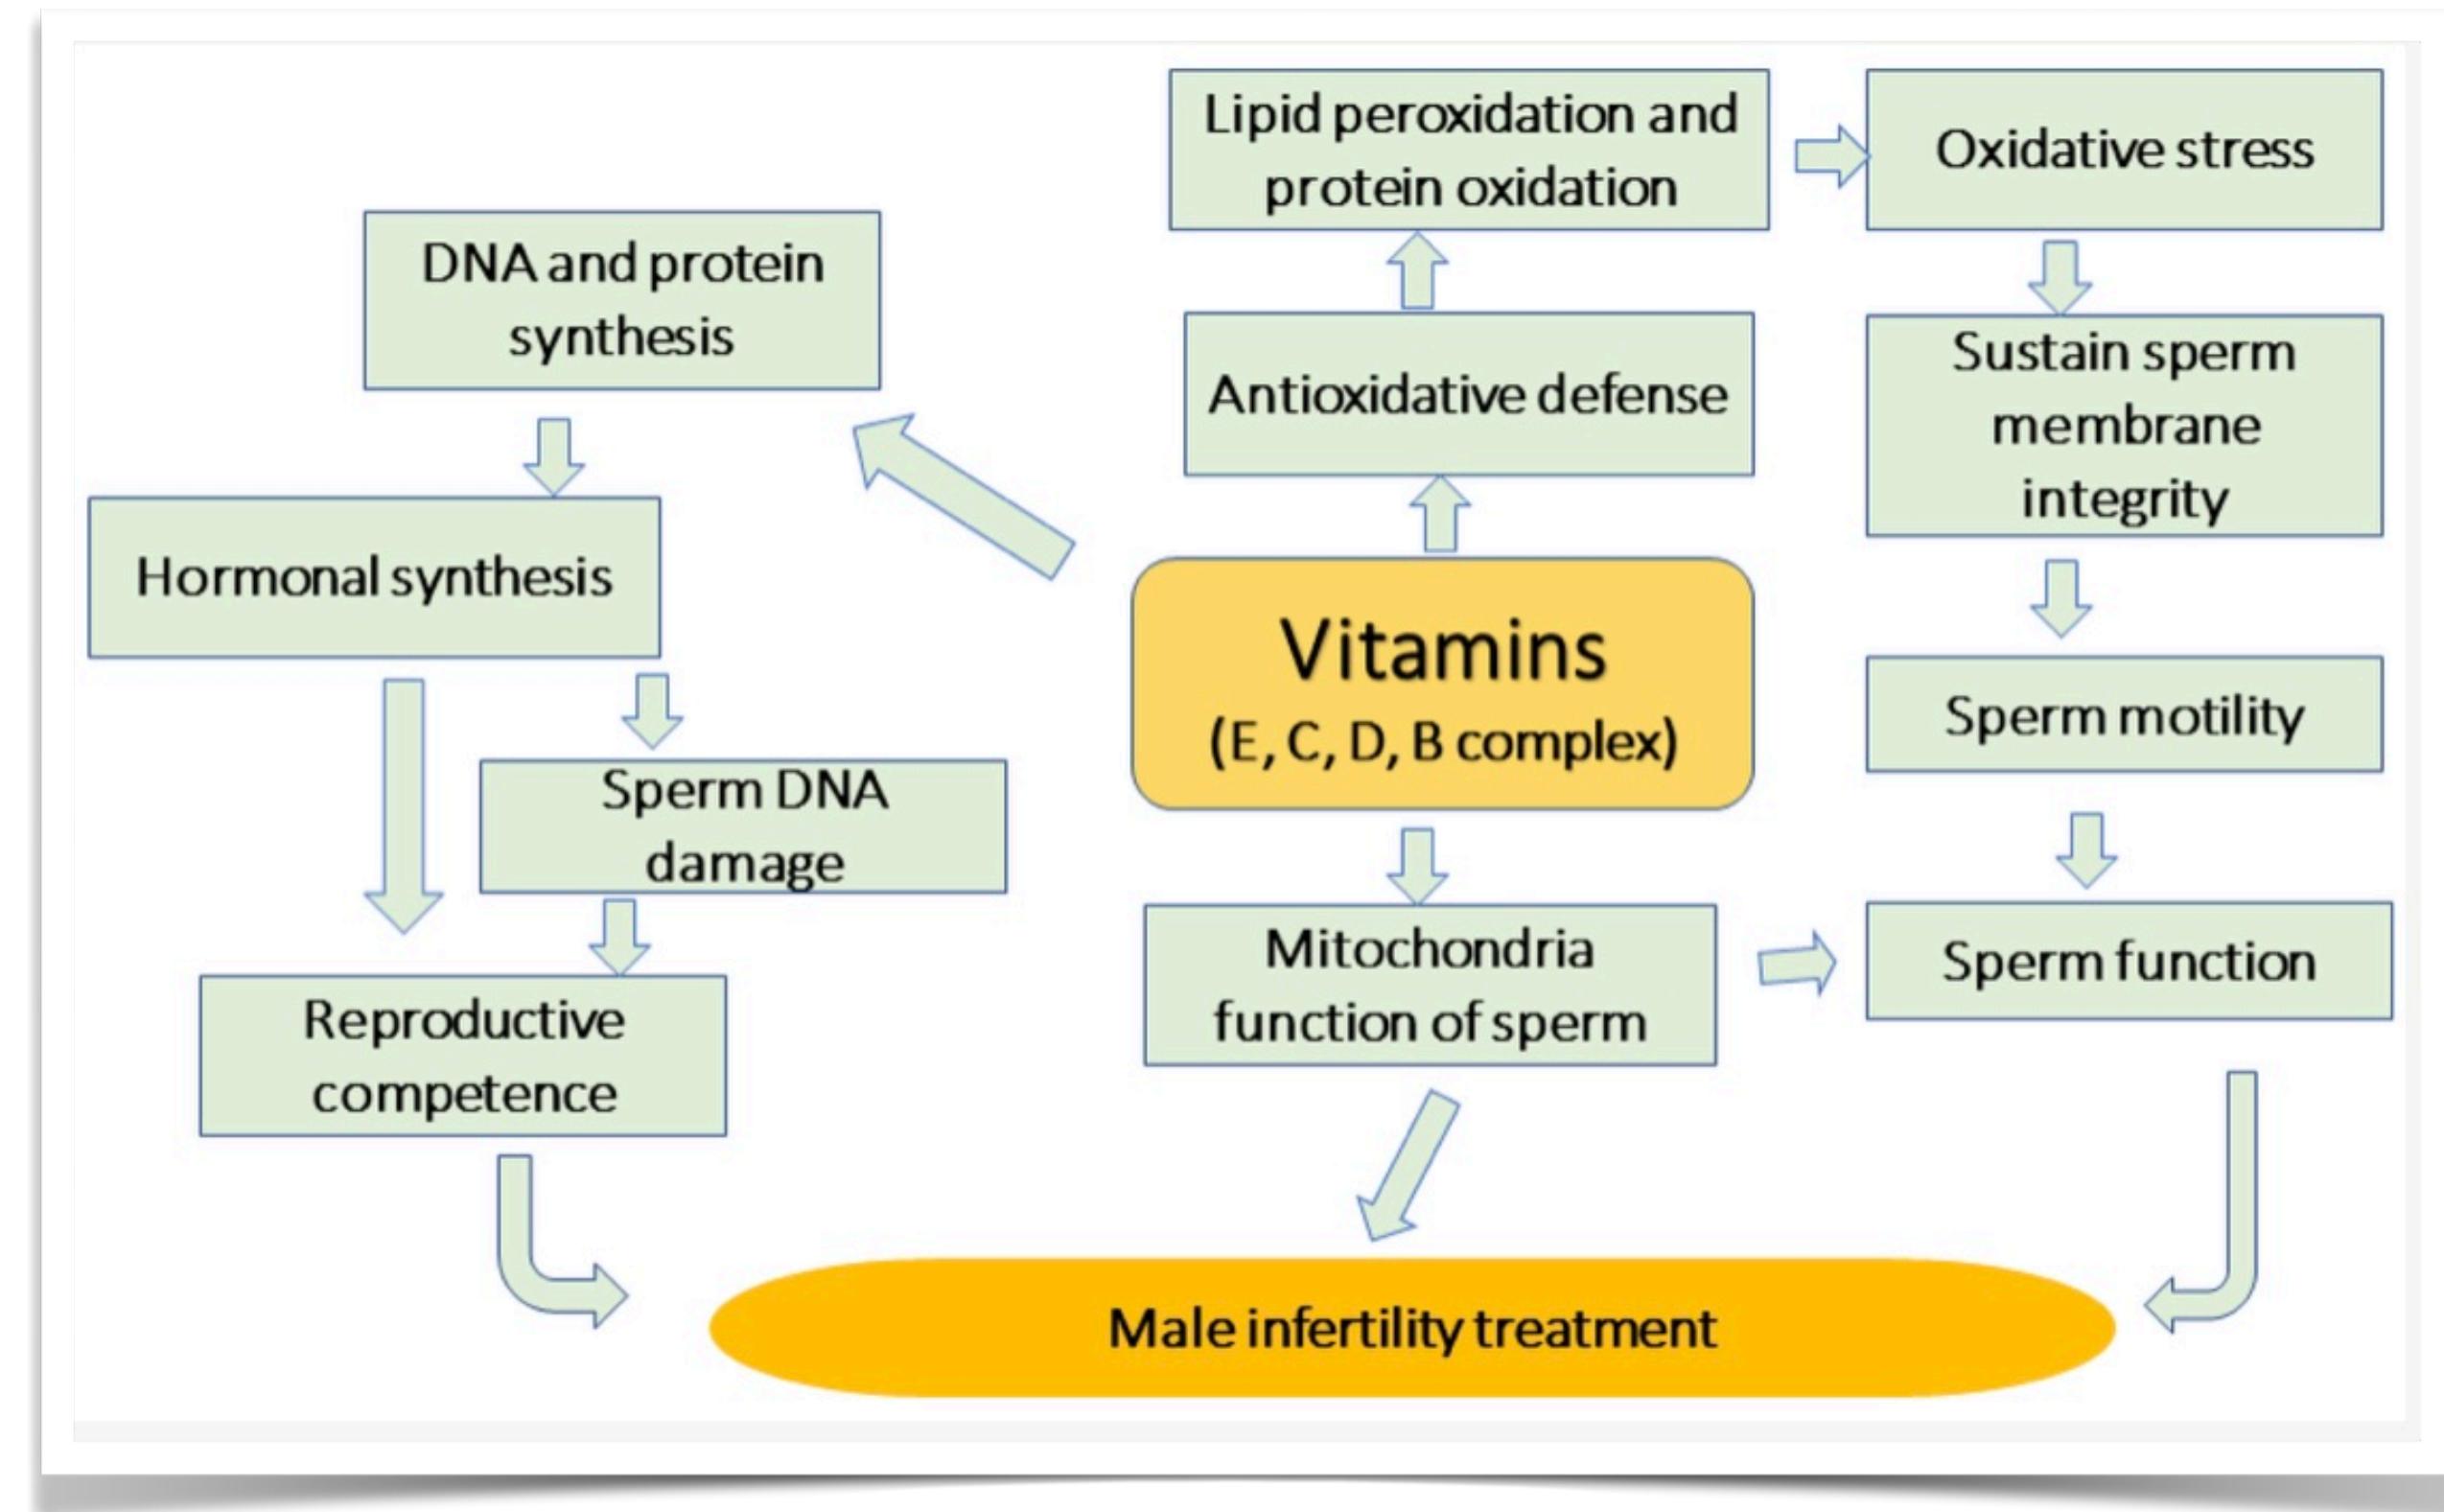

## Cibo, salute riproduttiva e interazioni con l'ambiente

## Take home messages

- La salute riproduttiva va tutelata perchè fa parte della salute complessiva
- I microbiobioti genitali rivestono un ruolo fondamentale nella protezione della salute riproduttiva e nella fertilità
- Microbaci e nutrizione comunicano a due vie
- In prevenzione: il modello mediterraneo vince sempre
- Quando ci sono problemi: magari abbassiamo i CHO rispetto a quanto scritto sui manuali, ma rimaniamo sul modello mediterraneo
- I micronutrienti e le sostanze bioattive del modello mediterraneo sono i nutraceutici chiave per il suo ruolo nella protezione della salute riproduttiva e nella tutela della fertilità
- Alimenti ricchi di sostanze bioattive consentono anche al fegato di proteggere il corpo dagli xenobiotici
